**A highly alarming study...** Citrus consumption promotes the development of skin cancers! At least, that was the finding of a scientific article written by a team from Brown University, Rhode Island (USA), recently published in the "Journal of Clinical Oncology". If there is cause for alarm, it is not at the findings of this article, but rather at the mere fact that it was able to be published! The reservations regarding methodology, included in the preface, actually take up one-and-a-half pages. Among other points, they relate to lack of representativeness of the sample, and to failure to take into account other parameters such as sun exposure which, as should be obvious without cutting-edge scientific training but simply through common sense, is a major risk factor. Similar correlations can also be drawn between the rate of divorce in the State of Maine and margarine consumption... Yet they are generally published in satirical magazines, and

above all they do not cast suspicion on fruits whose beneficial effects on health have been robustly demonstrated many times over, and on an industry already in great difficulty, on which thousands of jobs depend in often precarious zones.

## Banana

### June 2015

Although barely perceptible in early June, the seasonal slowdown in demand was confirmed toward the middle of the month in Southern Europe, with the arrival of seasonal fruits, the run-up to the school holidays and temperatures becoming summery, and then at the end of the month in Northern Europe with the arrival of summer across the continent. Furthermore, the overall African supply returned to average, after the marked shortfall in recent months, while the French West Indies supply climbed to 12 % above last year's level. However, the dollar banana supply remained limited in Northern Europe, thanks to the early start of summer programmes, coupled with a widening Colombian shortfall. Meanwhile, the spot dollar banana supplies observed in May at the various ports were scarce. Hence a sound balance was maintained in Northern Europe until the end of the month. Southern Europe also maintained its balance to some extent, despite some moderate stocks appearing from mid-June. All of the markets started to swell only toward the end of June, with demand undergoing a more distinct slowdown. Green prices, which had maintained very high, stable levels since the beginning of the year, were only slightly adjusted during this period, continuing to register levels 10 % above average. Conversely, the situation in Spain seriously deteriorated, due to a more severe slowdown in demand and the continuing supply surplus of the Canaries platano. Similarly the Russian market deteriorated significantly once more, in the face of rising imports now at very high levels for the season (+ 16 %).

■ **Banana: over to Africa!** Whereas all the operators are hanging on the health bulletins for El Niño, in an attempt to estimate its impact on the world supply in 2015 and 2016, other changes are taking place elsewhere, which too will have an effect on short and medium-term international balances. And in this case it is Africa which is ready to step up. There have been a host of development projects for export banana cultivation in recent months. At present, West Africa exports just over 500 000 t to the EU. In Côte d'Ivoire, for example, the boom is being fuelled by organic growth from the historic operators, by the arrival of new players, but also by an original initiative: the installation of two 250 ha blocks each involving ten young entrepreneurs pooling their technical operations (with EU support via the BAM). A recent report points to a possible surface area of 8 000 ha in the country by 2019, as opposed to just over 6 000 in 2013. Things are also on the move in Ghana, the Tom Thumb of West Africa in terms of export bananas, with scope for more operators and surface areas. Finally, Cameroon seems to want to get in on the act too. The government has for years had a stated export target of 500 000 t by 2019 (257 000 t to the EU in 2014). The country currently has nearly 8 000 ha in its possession. It seems that we have now moved on from good intentions to the action phase. A PHP project amounting to around 800 ha in the south of the country (Dehane region) is currently getting off the ground. The State plantation (CDC) aims to increase its productivity per hectare.

As for SPM, which has been shut down for many months, its sponsors hope to get back into business with over 2 000 ha, with the help of an African investment bank, the Cameroonian State and European support funds. To do so, they have just finished a round of meetings with the Cameroonian, French and Brussels institutions. However, we should take care not to place the burden of all possible future world imbalances on this African growth, which all in all remains modest in terms of absolute value, compared to the surface areas of its Latin American competitors. In Ecuador alone, the surface area in production is reportedly between 200 000 and 250 000 ha (note the imprecision of the figures!). Finally, local and regional demand is booming, due to rapid population growth and urbanisation. West African markets are ripe for development, with fruit consumption rising every year. A recent report commissioned by the European Commission evaluated the needs not presently covered at nearly 300 000 t for Côte d'Ivoire. These new projects will cater for those too.

■ **Banana consumption: still on the up.** European banana imports climbed by 1.6 % in May 2015 (from May 2014). It was the dollar (+ 2.2 %) and non-African ACP sources (+ 11 %) which drove the trend, whereas the African ACPs slipped (- 9.6 %). Over the last twelve months (June 2014 to May 2015), imports were just above 5 million tonnes. If we add to this European production (in a bad spell in May 2015), consumption over the last twelve months set a new absolute record at 5 639 000 t. However, the upward trend has been running out of steam since the beginning of 2015, and plateauing out. The situation is roughly the same in the United States. Consumption gained 1 % over the first five months of the year, reaching the record level of 1 720 000 t. Colombia and Costa Rica, the only sources to drop on the US market, clearly opted for the European market, with Colombia for example raising its exports to the EU by 13 % in the first part of 2015. Ecuador went the other way. In the United States, the Latin

American giant consolidated its place as the number two supplier with an 11 % increase in its supply. Conversely, it fell in Europe by a nearly equivalent volume, and a proportion of 4 %. Which might lead us to believe that both these sources are demonstrating the full force of the euro-dollar exchange rate effect (see *FruiTrop* 231, April 2015, page 40 et seq.).

## Temperate fruit

**■ European stone fruits: potential revised downward, particularly for the peach and nectarine.** The forecast figures from Medfel have just been re-evaluated. The final forecast is 2.90 million tonnes for the peach and nectarine, excluding Pavie, as opposed to 2.97 million tonnes in May, with a fall of 7 % for France from the first evaluation, and 9 % for Greece. The drop is smaller for Spain (- 4 %), while Italy actually revised its production slightly upward, by 2 %. The figures were also adjusted, albeit less significantly for the apricot, though with a 3 % decrease from the April forecast (497 868 t as opposed to 509 570 t). The fall was particularly marked for Italy (- 5 %). The forecast was also slightly lower for France (- 2 %), though the estimate underwent practically no correction for Spain (- 1 %) or Greece (0 %).

**■ European grape: potential stopping short of excess.** The Italian campaign began with the very first Vittoria and Black Magic at the end of week 24 in Sicily. Operators are confident since although a very high potential was not expected this year, the climate conditions were particularly favourable during the various key formation stages of the grape; so the crop is set to be sound, and of fine quality. However, production was down slightly last year (1.04 million tonnes, - 8 % from 2013), especially for Apulia (581 000 t, - 16 %), whereas Sicily had a good level (360 000 t, + 3 %). So exports fell slightly (439 000 t, - 12 %), with very small volumes aimed at Russia (1 200 t as opposed to the usual 15 000 t) due to the embargo. This situation, which last year weighed down on Red Globe sales, could recur with the extension of the Russian embargo. The French campaign reportedly has a slight head start, though the potential is set for an average level, like last year. Surface areas are continuing to shrink in France (5 266 ha in 2014, i.e. - 2 % on 2013), with the potential now down to just under 50 000 t. There was also an early start to the Spanish campaign, after last year's slightly reduced production (228 000 t, - 13 % on 2013).

**■ Southern Hemisphere pip fruits: fall in apple and pear exports confirmed.** We are now a good way through the Southern Hemisphere pear campaign, though the distinct slowdown which began in May has undermined the end of the season for certain varieties. Exports fell this year. They are reportedly down 16 % from 2014 for the main Southern Hemisphere exporter countries, with a considerable fall in Continental Europe (including Russia), whereas shipments were fairly high to the Middle East and stable to Asia. Yet the start of the campaign came even later for the apple. Hence in late June, only Gala had really got up to speed in Europe, whereas sales remained very low for Granny or Pink Lady, or even non-existent for the red varieties. So there was a considerable fall in exports to Europe, according to the aggregate total from week 26 (- 17 % on 2014). Shipments to Asia were also down. The export tempo remained just as high to the Middle East.

Sources: Hortgro, Infofruit

## Avocado

**June 2015**

The situation on a market historically buoyant in the spring turned on its head. Consumption remained slow due to the massive emergence of seasonal fruits and avocado retail prices maintaining very high levels (+ 16 %). Meanwhile, incoming Hass shipments were up considerably despite the fall in the South African supply. Kenyan imports returned to a higher level, while there was a particularly massive peak in incoming Peruvian shipments, quickly saturating the market. Hence, in spite of a rise in European avocado consumption from last year, the market came under pressure again, with some stocks forming. Import prices came undone, losing more than 4 euros/box in the space of a month. For the green varieties, the fall in rates was more limited because of the descending supply, remaining in shortfall.

PRICE	Varieties	Average monthly price euro/box	Comparison with the last 2 years
		14/15	13/14
	Green	5.90	- 2 %
	Hass	7.40	+ 21 %

	Peru	↗	+ 22 %	Hass supply rising steeply, with volumes 27 % above the average for the past two years; though green variety imports falling, with an ongoing shortfall (- 57 %).	+ 8 %
	Kenya	=	- 3 %	Hass supply stable, at levels 14 % above average, after a very late start to the campaign with a wide shortfall.	- 32 %
	South Africa	↘	- 9 %	Hass volumes beginning to fall, 10 % below average. Green variety imports down, and still in shortfall (- 7 %).	+ 16 %

■ **Review of the 2014-15 New Zealand avocado season: Antipodeans striking gold too!**

2014-15 was also a memorable year for producers from the Bay of Plenty, in more than one sense. On the volumes side, production and exports attained a high point. On the price side, the performance was just as fine, with economic returns to producers far exceeding those of the previous record season in 2011-12: this success was due largely to better downstream organisation since the establishment of Avoco, which encompasses nearly two thirds of the export supply. This has provided sound management of volumes to Australia, the prime outlet for New Zealand, and better harnessed the take-off of demand on Asian diversification markets. This fine campaign augurs well, and saw the "New Zealand Avocado Go Global" programme get underway, with the aim of tripling production by 2023.

# Orange

**June 2015**

Orange sales remained dynamic, in spite of the seasonal slowdown in demand due to the progression of seasonal fruits. The Spanish Navelate supply continued to shrink early, with prices strengthening, in particular for the last available batches (mid-June). Hence sales of Spanish Valencia Late remained highly fluid, and shipments peaked at higher levels than in previous years (+ 26%). Prices remained high for the season, at both the import stage (+ 12%) and production stage. In this favourable context, South African shipments continued to grow rapidly, with a supply 22% above average. In spite of a sometimes heterogeneous quality (insufficient coloration, acidity), Navel prices remained 11% above average.

PRICE	Type	Average monthly price euro/15-kg box	Comparison with average for last 2 years

## ■ South African citrus cultivation area: deceptive stability.

The lack of change between 2014 and 2015 in surface areas dedicated to citruses is deceptive. Background upward or downward movements were confirmed, but offset each other. It was no surprise that the grapefruit cultivation area, which had held up in recent seasons, recorded a severe fall. There was a considerable change in trend for oranges too: the slight growth seen since the end of the last decade gave way to stabilisation for Navel and a clear downturn for Valencia. The ongoing strong dynamic for easy peelers will come as no surprise to anyone (+ 1 300 ha in one year!), yet some are becoming more concerned in view of the demand prospects (see **FruitTrop** 232). Connoisseurs of the essential oils and concentrated juice markets will hardly be surprised at the ongoing upward surge by the lemon cultivation area. Surface areas increased by 800 ha between 2014 and 2015, and by nearly 2 000 ha in three years.

Source: CGA

which struck in January 2015 reportedly caused approximately 18 million USD of losses for the Israeli agricultural sector, according to the insurance fund Kanat, with high added-value citrus varieties such as Or among the least affected thanks to the protective systems in place (anti-hail nets). The economic context has also been highly unfavourable, with the steep fall in the euro against the shekel weighing heavily on the balance. In addition, the collapse of the rouble reportedly resulted in a 30% fall from last season in the turnover made with Russia, a vital market for Israel. The Israeli Farmers Association has requested an allowance of 51 million USD from the government to make up for the revenue losses registered on this market.

Sources: CMBI, CLAM

## Grapefruit

### June 2015

The under-supply enabled the grapefruit market to remain well-balanced. However, demand continued its seasonal fall given the arrival of the fine weather and the breakthrough of seasonal fruits. The Northern Hemisphere campaigns came to an end, with the last Spanish batches available at the beginning of the month, and limited Corsican batches in mid-June. Yet most significantly the South African supply remained in shortfall. In spite of the incoming shipments peak at the beginning of the month, volumes registered levels 17 % below average. Good sales in Northern Europe and overall exports revised downward managed to limit availability in France and build-up of stocks. Hence prices dropped slightly from the start of the campaign, though they maintained very good levels for the season (+ 21 %).

**■ Review of the 2014-15 Spanish citrus campaign: another catastrophe, according to the producers' unions.** According to Unio de LLauradores, the analysis of the official prices published by the regional government observatories indicates an estimated industry turnover of 735 million euros at the production stage, down 39 million euros from the already very difficult 2013-14 season. The balance was apparently particularly negative for easy peelers, with revenue falling by 58 million euros, due to another black year for Nules. The economic results seem to be similar to the 2013-14 season for orange, with the good second part of the season recorded for late Valencia and Navel compensating for another disastrous Naveline campaign. The balance was reportedly positive for the lemon and grapefruit, with the turnover up by 18 and 2.2 million euros respectively.

Source: La Unio

since the prohibition measures took effect. As for implementing additional measures, the Brussels authorities recognise that "it will be a long process". Greening began to spread like wildfire in 2004, and a non-contaminated vector of the African form of the disease was detected in Galicia in 2014.

Source: AVA-ASAJA

**■ US market opening up to the Spanish Verna lemon?** The Spanish Ministry for Agriculture is negotiating with the US sanitary authorities (APHIS) over the possibility of exporting the Verna lemon to the United States without applying cold insect control treatment, at the request of the Murcia Chamber of Agriculture and the Interprofessional Association for the lemon and grapefruit (AILIMPO). A study by a Murcia research institute (IMIDA) showed that female fruit flies could not lay on lemons during May and June, since the fruit skin is too hard.

Source: FreshPlaza

**■ Spanish producers believe that the European Commission is underestimating the risk of greening... and we cannot contradict them!** The Valencia Farmers' Association (AVA-ASAJA) has had enough. The only really tangible action implemented by the European Commission to protect the European citrus industry from the ravages of greening, namely the ban on imports of plant material from countries contaminated by the disease, is not even being applied. Murrayas plants, originating from countries officially recognised by EPPO as positive for the lethal bacteriosis, are continuing to enter the Community, with 27 interceptions of plants carrying the African or Asian form recorded

## Roots & tubers

Q2 2015

### Sweet potato (SP)

The white-fleshed sweet potato supply relied primarily on Egypt, which continued its marketing campaign. Its large and regular shipments earned better value overall than in Q1. The average rates, close to 0.80 euro/kg in Q1, approached 0.90 euro/kg during Q2. The Egyptian campaign drew to a gradual close in mid-June. The resumption of shipments from South Africa at the beginning of the quarter provided purchasers with an alternative. South African merchandise, sold at around 1.40 euro/kg in April, encountered competition from other sources and saw its sale price ebb in May and June to around 1.20-1.30 euro/kg. Finally, Honduran produce, shipped in smaller quantities, obtained fairly steady prices at around 1.50 euro/kg, dipping at times to 1.30-1.40 euro/kg.

Israeli orange-fleshed sweet potatoes sold at strong, high prices in Q2 (1.70 euro/kg). Produce from the United States, available until May, sold on

a downward trend from 1.60 euro/kg at the beginning of the period to 1.30 euro/kg on average in late May, when shipments were decreasing steeply. The rate for Honduran orange-fleshed sweet potatoes fluctuated more during the last three months, with a pronounced fall in April (from 1.60 to 1.20 euro/kg). After being suspended in May, shipments resumed in June with higher rates (1.50-1.60 euro/kg). Supplementing the supply, South Africa, rather specialised in the white-fleshed sweet potato export sector, began supplying in late April orange-fleshed sweet potatoes, which sold steadily at around 1.60 euro/kg. Some white-skinned white-fleshed sweet potatoes from Brazil and the United States sold on an occasional basis for between 1.50 and 1.70 euro/kg.

### Yam

Ghanaian white yams largely dominated the market, selling steadily at around 1.20 euro/kg. Some Puna batches from the same source supplemented incoming shipments in the second half of April,

and sold on the same price footing as the whites. French produce remained on the market until the end of April, which marked a campaign extension of approximately two months from 2014. Prices, which in the first half of April maintained a strong level of 3.00 euros/kg, then dipped to 2.75 euros/kg for the last shipments, which were less reliable in terms of quality. Some additional batches from Côte d'Ivoire sold at 1.10 euro/kg in the second half of April.

### Cassava

After an April slump (to below 1.10 euro/kg), the rate of Costa Rican cassava returned to a more normal level in May, climbing by 0.05 to 0.10 euro/kg.

### Eddoe

Eddoes from Costa Rica, the sole supplier for this product, sold throughout the period at a very stable price (2.00 euros/kg on average). Depending on the sizes and quality of the tubers, prices ranged from 1.80 to 2.30 euros/kg.

## Other exotics

Q2 2015

### Plantain banana

The plantain banana market saw a distinct recovery after a tough time in Q1. Liquidation of stocks and the reduction of Colombian shipments made a big contribution to bringing sale prices more into line with the norm. In April, Colombian plantains neared the 1.00 euro/kg mark, before slightly exceeding it with prices of between 1.00 and 1.10 euro/kg, depending on the produce quality. Disrupted during the Q1 crisis, Ecuadorian plantain bananas recovered their niche, selling steadily at 0.10 euro/kg below the prices charged for Colombian fruit.

### Chayote and christophine

Costa Rica remained the sole supplier of chayote and christophine during Q2 2015. The price of Costa Rican chayotes, which began the period strongly due to their rise during March, dropped in May before again taking an upturn in early June. It then stabilised at a foot-

ing of 1.20 euro/kg. The christophine rate exhibited more variation, though with a low amplitude. Depending on the incoming shipments, it fluctuated between 1.60 and 1.80 euro/kg. Some christophine batches from Martinique supplemented Costa Rican shipments. Air-freight christophines maintained a steady market price of around 2.80 euros/kg.

### Dasheen

The rate of the Saint Vincent Dasheen, which maintained a very stable 2.80 euros/kg until early May, subsequently climbed until the end of the period,

### Chilli pepper

The price of the chilli pepper fell from April to May, across all sources. Nonetheless, each source maintained a distinct price level, with the highest for Guadeloupe, the lowest for the Dominican Republic, and intermediate prices for Martinique. In June, rates stabilised. Prices fell to their lowest point in late April-early May, because of larger shipments from the Dominican Republic, which weighed down on all transactions.

## Pineapple

### June 2015

In June, the situation on the pineapple market deteriorated considerably. From the beginning of the month, the high availability of seasonal fruits and the fine weather gradually diverted demand away from the pineapple. So operators were rather struggling to keep sales moving. The situation worsened at the beginning of the second half-month, with the arrival of substantial volumes of Costa Rican Sweet, due to the natural flowering. The market was no longer able to handle these volumes, and prices tumbled. At the end of the month, there were hosts of batches available at after-sales prices. This poor sales phenomenon did not spare the established brands, which were also very heavily laden with fruit.

The situation was just as tight on the air-freight pineapple market. The availability of an abundant and inexpensive seasonal fruits supply greatly hindered the placement of the incoming batches on the market. And the numerous quality concerns did nothing to help switch demand back to this fruit. Hence stocks gradually formed, forcing operators to lower their prices initially, before resorting to after-sales prices. Several opted to considerably cut back their imports, though this did not generate any positive effects on demand. The situation was also difficult for the Sugarloaf. Rates remained fairly stable at between 1.75 and 2.00 euros/kg. However, this variety too saw after-sales prices, under pressure from the increasingly large Togolese supply.

Sales on the Victoria market were often complicated. With the availability of seasonal fruits, lack of interest in this fruit became increasingly marked throughout the month. The supply was gradually scaled back to adapt to the demand of a few die-hards.

## Mango

### June 2015

The market had a difficult June, with demand down. The combined shipments from West Africa (Côte d'Ivoire, Mali, Burkina Faso and Guinea) and Latin America (Brazil, Puerto Rico and Dominican Rep.) generated stocks. The official end of the Ivorian campaign encouraged operators to ship even bigger volumes, with the lateness of the rains heralding that the fruits would keep well. Sales of West African mangoes were handicapped this campaign by the predominance of small sizes. The multiple sources, qualities and sizes disrupted sales, driving the Kent rate downward. The last Ivorian batches often sold at open prices due to their qualitative disparity. Mangoes from Mali and Burkina Faso held up better, in spite of quality problems, with their higher cost price also a factor. Keitts from Puerto Rico and the Dominican Rep., especially aimed at the supermarket sector, sold more steadily and at higher prices. Batches from Guinea, received continuously in Northern Europe, sold for 4.00-5.00 euros/box until the 3rd week of June (last incoming batches). After low prices at the beginning of the period (3.50 euros/box), the price of Brazilian Tommy Atkins available in Northern Europe recovered to 4.75 euros/box on average at the end of the month. Keitts

and Palmers from Brazil obtained higher prices, of around 5.00-6.00 euros/box.

The air-freight market also had a very difficult period. The big shipments from West Africa (especially Côte d'Ivoire) until the 2nd week led to the formation of substantial stocks, with sluggish demand. The poor sales caused deterioration in quality. The low sale prices of advanced maturity batches weighed heavily on transactions, with operators forced to make price concessions, to the point of clearance sales. The Mexican campaign began in this context, with prices falling. Thereafter, purchasers turned away from African mangoes, with their unreliable quality, in favour of Mexican mangoes, which kept better. Their rates stabilised, while the African mango rate came undone. The 2nd week saw the start of the Senegalese campaign, with lower prices than Mexican produce. The market saturation eased at the end of the month.

## Sea freight

**June 2015**

At 73c/cbft the TCE average for the first six months of the year is approximately US\$0.10c above the figure for last year and the highest since the US\$100c/cbft of 2008 for the period. With May and June 2015 calculating a similar level to the corresponding months last year and January well below, the difference in 2015 is partly attributable to the strong charter market performance between February and April, and partly down to the significant and well-documented reduction in bunker costs.

Unlike in previous years where the combination of a rise in Ecuadorian banana volumes and a firm Med market tightened the supply of capacity and drove the charter market northwards, this year bananas did not play an active role in the drama – indeed they barely even made it onto the stage.

This was partly down to the growth in importance of the container lines in the Ecuador to Eastern Med trade lane, partly because the same markets have anyway become marginalized, and partly because the largest reefer operator Seatrade has adapted its business model to focus on the reliability of COAs instead of relying on spot charters.

The foundation on which the seasonal peak was built was Chile, which absorbed the majority of the top end units between January and April. And while there wasn't a great deal of spot action, the volume of fruit handled was significantly higher than last year: this increase was the main reason for the rise in number of units to the trade. However the work-to-rule on the US west coast, which slowed port operations for container line and reefer alike, resulted in schedule delays and, consequently, the need for disproportionately more tonnage to ship the higher cargo volume.

Between May 2014 and April 2015 Chile exported 2.036m pallets of fruit, slightly down on both the 2013/14 (2.044m) and 2012/13 (2.061m) figures. Of these totals,

the specialized reefer accounted for 554K pallets this season compared to 486K pallets last season and 679K pallets the previous year.

Interestingly and somewhat paradoxically, despite the PMA/ILWU dispute the US West Coast received 37K pallets more fruit this season than last. The US East Coast meanwhile saw a recovery in volumes to 400K pallets – but this figure is still well below the 470K pallets shipped in 2012/13, also perhaps indicating a switch in some volumes to the container lines. However the most significant fall in specialized reefer traffic was the drop from 86K pallets to 'other' markets in 2012/13 to only 12K pallets this season. This is mostly related to the fall in value of the Rouble against the US\$.

There is a sense in Chile that a balance in market share between the reefers and the lines has been achieved. How or whether the lines choose to take advantage of a wider Panama Canal to make further inroads into the reefers' dominance of table grape shipments to the US East Coast by using larger, more cost efficient vessels on the trade lane from next year, remains to be seen.

While the Chilean table grape charters were and are likely to remain a critical base for the reefer charter market between January and April, it was the South Atlantic squid that dominated the spot business for small, handysize and also large vessels for the first time. With the absence of spot banana business, a good squid catch has become a vital component of a February through April charter market peak. This year the number of loadings totaled 55 to the end of May, of which 24 were units chartered in.

This season was just as big and even more eventful than last year: there was an early start, with the first vessel chartered in January, a strong mid-season with plenty of chartering action, and a conclusion so abrupt that major owner/operator Lavinia was obliged to cancel the final charter for lack of cargo.

### ■ Dunkirk, the number 1

**French port for containerised fruit imports.**

Fruit traffic has doubled in ten years, reaching 710 000 t in 2014. Nearly one container in every ten now handled at Dunkirk contains fruits or vegetables. Besides the French West Indies banana which arrived in 1998, the port is also a major hub for Moroccan products (Dunkrus Agadir-St. Petersburg line), and since the beginning of 2015 has captured part of the banana flow from West Africa. This performance is all the more laudable since during the same period, certain Northern Range ports have seen their fruit and vegetable imports decline (- 600 000 t for the port of Antwerp, which now handles approximately 1 000 000 tonnes). Dunkirk is harnessing its geographic location at the crossroads between the United Kingdom, the Paris Basin and Belgium, with rapid sea access and the presence of numerous and competitive private storage infrastructures (5 temperature controlled warehouses, with a total capacity of 100 000 m<sup>2</sup>).

# Statistics

## 2013 and 2014 fresh fruit and vegetables European imports

### Source and methodology

All the figures published here are from European Customs sources published by Eurostat.

#### Observation

- Customs statistics make a distinction between intra and extra-European imports. Intra-European imports report trade and do not correspond to the actual quantities available (double accounting with extra-EU imports is possible). Extra-European imports concern imports to the European Union from third countries (EU entry points).
- Quantities from EU outermost regions (the four French overseas departments, Madeira, the Canary Islands and the Azores) have not been included in Community imports since 1997.
- The European Union had 12 Member States until 1994, 15 Member States from 1994 to April 2004, 25 Member States from May 2004 to December 2006, 27 Member States from January 2007 to June 2013 and 28 Member States from July 2013.
- All quantities are in tonnes.
- The differences that may appear between the 2013 data published in the July-August 2014 issue of **FruitTrop** (No.224) and the 2013 data in the present issue result from later readjustments by the European statistical services.
- Country codes according to the official EU norm:

<b>AT:</b> Austria	<b>EL:</b> Greece	<b>MT:</b> Malta
