## EUROPEAN MARKET

No change on the European markets, maintaining their balance.

On the one hand, the overall supply has remained high despite the big volumes shortfall from the French West Indies rapidly narrowing (73\% below average). Whereas incoming African volumes have stabilised at average levels, incoming dollar banana shipments have continued to rise. The Colombian production peak has continued at high levels ( $12 \%$ above average), Costa Rica has maintained an upward trend at high levels, while Ecuadorian volumes have increased slightly, maintaining above-average levels. On the other hand, in Western Europe demand has remained dynamic and sufficient to absorb incoming volumes because of the favourable context (promotions, limited presence of other fruits). Hence the balance has held up, and prices have stabilised at levels slightly below average for the season. Furthermore, demand has remained sluggish in Eastern Europe, though the balance has held up and prices have remained low for the season. Finally, in Spain, prices have continued to strengthen because of a dynamic sales tempo.

## FRANCE

## French market maintaining some balance.

Local demand has remained lively because of a favourable context (promotions, few competing fruits). However, despite a big lack of FWI fruits (15\% below average), the market has remained well-supplied: African volumes have maintained average levels, and some dollar bananas have been available. In addition, for certain operators, the low retail prices (promotional commitments) have led to a slowdown in ripening centre sales, and are starting to affect green banana sales. Hence despite a slight saturation in yellow bananas, some balance between supply and demand has again been felt, and prices (outside of promotions) have remained stable, disappointing and slightly below average, again subjected to pressure from promotional commitments.

## GERMANY

## German market still stable and balanced.

Sales on the local market have maintained a tempo slightly above average for the season ( $+4 \%$ ), in particular because of limited competition from other fruits. In addition, the export markets have remained dynamic. However incoming volumes have been high because of the Colombian peak at aboveaverage levels, and the seasonal increase from Costa Rica. Hence incoming shipments have remained sufficient and in line with demand, helping the balance hold up. Finally, prices have stagnated at slightly below-average levels.

## SPAIN

Spanish market maintaining a very good dynamic.

Although for the past two weeks the Platano supply has regained above-average levels ( $+16 \%$ in w.42), sales have continued to accelerate, in particular because of a very limited presence of competing fruits; thus they registered a sufficient tempo to easily absorb the incoming volumes. In this context prices have continued to increase, to above-average levels (+9\%).

## ITALY

## No change on the Italian market.

Local demand has maintained some vitality because of the gradual reduction in pressure from competing fruits, and the implementation of some promotions. However, the yellow banana sales tempo has not yet reached full speed, especially because of temperatures still high for the season. In addition, the seasonal increases from the various origins (Costa Rica, Colombia, Africa) have kept the shipments level high. Hence a balance has been established, and prices have stabilised at below-average levels (-4\%).

## POLAND

Polish market still stable and maintaining some balance.

On the one hand, despite moderate pressure from competing fruits, the sales tempo has remained slow because of high temperatures. On the other hand, incoming volumes have remained high because of the Colombian production peak and large incoming shipments from Costa Rica and Ecuador. Furthermore, availability of category 2 fruits has been higher. Hence prices have maintained stable below-average levels (-8\%).
